Problem #1. Functions Part 1

Navigate to worksheet P01. Complete the tasks described below using functions. Any completed material that is deemed to be manually calculated will not receive any credit. All results may work as intended regardless of how the data is sorted or filtered.

Summary Statistics by Neighbourhood			
Neighbourhood	Number of Listings	Average Price	Average Ratings
Manhattan	A	B	C
Brooklyn			
Queens			
Bronx			
Staten Island			

• Task #1:

- Fill the cells in the **Red Box: A** with the number of Airbnb listings by neighbourhood. For instance, cell M4 should display the total number of Airbnb listings in Manhattan.

• Task #2:

- Fill the cells in the **Blue Box: B** with the average price of Airbnb listings by neighbourhood. For instance, cell N4 should display the average price of all Airbnb listings in Manhattan.

• Task #3:

- Fill the cells in the **Orange Box: C** with the average ratings of Airbnb listings by neighbourhood. For instance, cell O4 should display the average ratings of all Airbnb listings in Manhattan.

Problem #2. Functions Part 2

Navigate to worksheet P02. Complete the tasks described below using functions. Any completed material that is deemed to be manually calculated will not receive any credit. All results may work as intended regardless of how the data is sorted or filtered.

Property Information Lookup			
Price Rank	Price (\$)	Host ID	Ratings
1			
2			
3	A	B	C
4			
5			

• Task #1:

- Fill the cells in the **Red Box: A** with the price (dollar terms) of the 1st ~ 5th most expensive Airbnb listing in the given dataset. For instance, cell M4 should display the price of the most expensive Airbnb listing in New York City.

• Task #2:

- Fill the cells in the **Blue Box: B** with the Host ID corresponding to the 1st ~ 5th most expensive Airbnb listing in the given dataset. For instance, cell N4 should display the Host ID corresponding to the most expensive Airbnb listing in New York City.

• Task #3:

- Fill the cells in the **Orange Box: C** with the ratings of the 1st ~ 5th most expensive Airbnb listing in the given dataset. For instance, cell O4 should display the numerical rating of the most expensive Airbnb listing in New York City.
